Summary

Penultimate-year Data Science Engineering student with hands-on experience building **full-stack web applications, GenAI-powered software, and user-facing platforms**. Proficient in **Python, JavaScript, React, SQL, and REST APIs**, with applied experience in **software development methodologies (Agile/Scrum)**, CI/CD, and collaborative engineering workflows. Passionate about building scalable, impactful products at the intersection of **financial technology, consumer banking platforms, and data engineering**.

Education

Manipal Institute of Technology Aug 2023 – Expected May 2027
B.Tech, Data Science Engineering
Relevant Coursework: **Software Engineering, Database Systems, Data Structures & Algorithms**, Operating Systems, Big Data Analytics, Statistical Analysis

Experience

Intellect Design Arena (FinTech) – Mumbai, India May 2025 – Jul 2025
Software Engineering Intern

- Built and maintained **full-stack data applications** using **Python and SQL** within an **Agile development team**; contributed to sprint planning, code reviews, and daily standups following structured **SDLC methodology**.
- Implemented **CI/CD pipelines** with 150+ automated tests (85% coverage), accelerating feature delivery by 40%; integrated **REST API endpoints** to connect backend data services with frontend reporting dashboards.
- Developed **KPI analytics dashboards** tracking agent performance metrics for banking operations teams; performed EDA and **anomaly detection** on large-scale **financial transaction datasets**, improving data accuracy by 30%.

YaanBarpe – Manipal, India Oct 2024 – Present
Technical Head yaanbarpe.in

- Led **end-to-end development and deployment** of a **user-facing web platform** serving **3,000+ users**; managed full product lifecycle from requirement gathering through production, applying **user-centred design principles** to improve platform engagement.
- Directed a **4-person engineering team** using collaborative workflows; authored technical documentation, SOPs, and **project management** processes to coordinate cross-functional delivery.
- Built **GitHub Actions automation** reducing manual publishing time by 50%; optimised SQL queries for sub-200ms performance across production databases.

Projects

CrimeConnect – Full-Stack Analytics & Case Management Platform 2025 · GitHub
React, Node.js, JavaScript, Python, PostgreSQL, SQL, scikit-learn, REST APIs

- Built a **responsive full-stack web application** with a **React frontend and Node.js REST API backend**; designed **intuitive UI components** enabling non-technical users to query and visualise complex operational data at scale.
- Integrated **Python ML classification pipeline** (scikit-learn, 82% accuracy) with the web interface via REST API; designed **PostgreSQL schemas** with optimised analytical queries, reducing manual data processing time by 60%.

MedRAG – GenAI-Powered Query Application 2025 · GitHub
Python, LangChain, FAISS, PyTorch, Flask, REST API

- Built a **GenAI software application** using **Retrieval-Augmented Generation (RAG)** and LLM inference via **Flask REST API**; applied **prompt engineering** to ground model responses in structured data, achieving 40% accuracy improvement over baseline.
- Designed a **quantitative evaluation framework** to measure and validate model outputs; documented methodology for usability assessment of AI-generated responses against user-defined ground truth.

Flora Fight Frenzy – Interactive Game with AI System 2024 · GitHub
Java, Data Structures, JUnit, OOP

- Implemented **minimax AI algorithm** in Java with comprehensive **JUnit test suite (90% coverage)**; benchmarked and documented performance metrics, optimising game engine by 70%.

Technical Skills

Languages: Python, JavaScript, Java, SQL, Bash
Web & Frontend: React, HTML5, CSS3, Responsive Design, REST APIs, Node.js, Flask
GenAI & ML: LangChain, RAG Systems, Prompt Engineering, LLM API Integration, scikit-learn, PyTorch, NLP
Data & Databases: pandas, numpy, PostgreSQL, MongoDB, ETL Pipelines, SQL Optimisation, EDA, Financial Data Analysis
Software Engineering: Agile/Scrum, CI/CD (GitHub Actions), Git, Automated Testing (pytest, JUnit), Docker
Productivity & Tools: MS Excel, MS Word, MS PowerPoint, Jupyter Notebooks, Streamlit, Power BI

Achievements & Certifications

Certifications: Machine Learning Specialisation (Johns Hopkins · Coursera), IBM Generative AI, Data Structures & Algorithms (Coursera)
Competitive Programming: 150+ LeetCode problems – algorithmic thinking, data structures, optimisation
